

JMK is able to supply filters fully compliant with the European RoHS and WEEE directive after the 1st of January 2006.

Most of our filters have already been converted to meet the RoHS directive.

We have some customers who prefer that we do not use lead free solders on our internal solder joints, so we are prepared to manufacture filters with either lead free or 60/40 tin/lead solder.

When ordering, we would ask our customers to request “RoHS” compliant on the purchase order.

Our lead free logo will be shown on the filter label and packing box.
