

The EF-1657-3 is an economical filter for use with systems designed to function in the tempest or other environment where the suppression of high frequency emissions is important. This filter features feed-through capacitors and has insertion loss to beyond 1.0GHz.

Operating voltage = 115-250vac
 Operating current = 3 amps
 Operating frequency = 50-60 Hz
 Operating temperature = -20 - +50 oC
 Diel. withstanding (line-case) = 1500V~ for 1min
 Diel. Withstanding = (line-line) = 1500Vdc for 1 min
 Leakage current = 2.5ma @ 250Vac, 60Hz
 Max residual voltage after 1 sec = 34V Max.

UL Recognized

Order p/n: EF-1657-3
